

The New Jersey Economic Development Authority (EDA) is pleased to announce the launch of another new product in EDA's Clean Energy Solutions portfolio - the Large Scale CHP-Fuel Cells (LSCHP-FC) Program. Funded by the New Jersey Board of Public Utilities (BPU), and jointly developed by the EDA and BPU, the program is designed to support the development, design, and construction of high efficiency Combined Heat and Power (CHP) and Fuel Cell (FC) projects in New Jersey.

The LSCHP-FC Program (<http://www.njeda.com/lscp-fc>) offers project-based grants to New Jersey-based Government, (Federal, State, or Local), Commercial, Institutional or Industrial entities (including 501 c (3)) with a Combined Heat and Power (CHP) or Fuel Cell (FC) project with electric generating capacity of greater than one megawatt.

The grant award will be a function of the system size and amount of electricity that the CHP-Fuel Cells project generates. Total LSCHP-FC Program awards cannot exceed \$3 million per project with maximum percent of project cost capped at 30% for CHP and 45% for Fuel Cell Projects.

The LSCHP-FC Program is a competitive grant program. Applications must be received prior to the closing of the Solicitation on June 25, 2012 at 5:00 pm EST.

For additional information, or to apply, visit <http://www.njeda.com/lscp-fc>, or call 866-534-7789.
